

More Efficient

Ultrablend contains water inhibitors and stabilizers that help prevent formation of gums and sludge, keeping fuel lines and filters free from blockage. An EPA-approved microbiocide (Registration No. 1706-101) controls algae and microbiological growth. With Ultrablend, your oil-fired heating system will run cleaner, and therefore operate at maximum efficiency all season.

Cleaner

Ultrablend's special additives contain detergents to maintain fuel system cleanliness and maximize combustion efficiency. A dispersant reduces clogging of filters, strainers, oil lines and nozzles. With Ultrablend, your system runs cleaner, resulting in a cleaner home and a cleaner environment.

Economical

With oil heat, you have already chosen the most economical way to heat your home. Ultrablend burns cleaner than conventional heating oil. By burning cleaner, Ultrablend reduces your annual maintenance cost and saves you money by insuring that your system operates at peak efficiency. Ultrablend contains a corrosion inhibitor which prevents rust and extends the life of all metal components, which means a longer life for your tank and your entire heating system.
